### SUMMARY DESCRIPTION

Located approximately twelve miles north of Richmond, the town of Ashland began as a small mid-19th-century summer resort and is still considered by many today as a suburb of Richmond. The principal resource of the town's historic district is the rich collection of late 19th- and early 20th-century residential architecture. Most of the houses are frame and are gaily decorated with fanciful trim, evoking the town's resort origins. The town stretches out from two major crossroads -- Center Street and Patrick Henry Highway. Topographically Ashland is flat with several sections located just above the water table. The area is richly populated with deciduous trees. The trees together with large frame dwellings on spacious lots maintain Ashland's image as a 19th-century suburban community. The historic district is approximately 159 acres and falls within the town's corporate limits.

### DETAILED ANALYSIS

Ashland's street plan follows an irregular grid. Although three traffic arteries, Thompson Street, England Street, and Hanover Avenue, are joined just within the heart of Ashland to form a dividing "Y", the town's grid is more notably broken into quadrants by Center Street, Thompson Street, and England Street (see map). The grid plan in the southwest quad appears noticeably tighter than in the remaining quads. Macon Circle to the northeast is a mid-20th-century development (ca. 1950s) and is the only planned break from other residential neighborhoods.

To the east of town runs U.S. Route 1. A 1940s commercial highway, Route 1 provided major north-south automobile access from Washington, DC, to Richmond. Route 1 still receives substantial local traffic, but its use has been largely supplanted by U.S. Interstate 95. Land use in Ashland is primarily residential with light commercial use situated on England Street, Patrick Henry Highway, Route 1, and on portions of Center Street (between Henry Clay Road and Myrtle and Thompson streets).

The focal point of Ashland is Center Street, a wide avenue with two centrally located railroad tracks flanked on each side by paved, narrow traffic lanes. Extending the full length of Center Street are Ashland's finest late 19th-century houses of the Queen Anne and Colonial Revival styles. Housing patterns indicate that late 19th-century settlers preferred Center Street and Henry Clay Road for their residences. The Randolph-Macon College campus, which by 1879 consisted of three buildings, originally faced onto Center Street. In the early 20th century, the college underwent additional growth spurring the construction of houses along College and Caroline avenues. Town government offices are located in the triangle defined by Hanover Avenue, Thompson Street, and St. James Street. The 100 blocks of North and South Center Street contain commercial structures built during the first quarter of the 20th century. Most of the buildings, including 104 (vacant), 106 (Hughes Drug), and 108 (Ashland Furniture Company) South Center, were modernized, and false fronts were added in the mid-20th century. 113 South Center (Colonial Torch), an example of the commercial Italianate, was renovated in 1979. 100 South Center Street (Railroad Mall) has been the least altered with display windows separated by simple brick pilasters. Churches and schools are located throughout the town. A 1950s school, interesting while not in this district, is the John Handley School at Vaughn Road and School Road.

Statement of Significance (in one paragraph)

### STATEMENT OF SIGNIFICANCE

The Ashland Historic District, with its large collection of late-Victorian and Edwardian frame dwellings and its brick commercial core, all set among hundreds of trees, survives as a fine example of a railroad and streetcar suburb preserving much of its turn-of-the-century character. Named for the Kentucky home of Hanover County native Henry Clay and incorporated as a town in 1858, Ashland began as the antebellum resort development of the Richmond, Fredericksburg and Potomac Railroad Company. While little remains of the original town fabric, much of it having been lost in the economic collapse of the town during the Civil War and its aftermath, the resort in its heyday boasted an interesting complex of hotels, cottages, and recreational buildings serving both travelers and Sunday picnickers from Richmond. The surviving components of the district more accurately reflect Ashland's redevelopment by the R F & P as a commuter suburb in the final quarter of the 19th century and the later building boom of the post-World War I era. The focal point of the district is Center Street, which displays a full range of Victorian styles from the Italianate and Second Empire to the Eastlake, Queen Anne, and Colonial Revival. Also notable is the early 20th-century downtown area located between Henry Clay Road and Myrtle Street, an interesting assemblage of brick structures that exemplify the commercial ethos of the 1920s. With the addition of three Georgian Revival academic buildings of Randolph-Macon College (not included within the boundaries of the 1979 nomination of Randolph-Macon to the Virginia Landmarks Register and the National Register of Historic Places), the district illustrates the vital role which both the railroad and the college have played in Ashland's development.

### HISTORICAL BACKGROUND

The story of Ashland is one of 19th-century romantic capitalism that begins with a railroad company president who took an uninhabitable tract of land and, with imagination, hard work, and optimism, turned it into a profitable resort.<sup>1</sup> Later, his successors, instilled with the same entrepreneurial spirit and capitalizing upon the late 19th-century middle class movement away from the industrialized city to the countryside, developed the town as a railroad and streetcar suburb of Richmond.<sup>2</sup>

Railroad transportation was relatively new to the country in 1836 when the Richmond, Fredericksburg and Potomac Railroad Company bought a 462-acre tract of land in Hanover County bordering its newly laid tracks. The railroad line was designed to connect Richmond and Fredericksburg with the trade terminals on the Potomac River. This trade route had been serviced previously by a series of stagecoach roads, ferries, and steamboat routes through the western part of the county.<sup>3</sup> However, not until Edwin Robinson became president of the company in 1846 was the Hanover tract perceived as much more than a source of lumber and fuel. The area that interested Robinson was known as a "slash" (a swamp), hardly a likely site for a town. Factors other than topography persuaded Robinson that the area

7. Description -- Detailed Analysis (continued)

Four visually distinct areas located within the Ashland Historic District include the areas surrounding Henry Clay Road, Center Street, College Avenue and St. James Street. Henry Clay Road extends between Center Street and North Snead Street. Buildings along most cross and parallel streets do not share similar details to the late 19th-century and early 20th-century structures found on Henry Clay Road. With several exceptions, the Henry Clay houses are small, frame, vernacular late 19th-century houses on small lots. Most of the structures represent building styles derived from the Colonial Revival.

To many, Center Street is considered Ashland's most visible historic area. Bisected by railroad tracks, Center Street is viewed daily by Amtrak travelers heading north and south. Center Street displays Ashland's rich Victorian styles. Italianate, Eastlake, Queen Anne, Second Empire, and Colonial Revival houses line virtually the entire length of Center Street from the north and south edges of town. The large 2-to-2½-story houses of frame construction tend to be situated on spacious lots above street grade observing similar setback lines. Yards are well landscaped and are occasionally fronted by either wood fences (see 904 South Center) or, in some instances, cast-iron fences (see 500 North Center Street). The street exhibits decorative sawn porches (see 904 and 1014 South Center Street).

The town's only remaining Greek Revival house is located at 713 South Center Street; its original siding has been altered. The transitional Greek/Italianate-style structure built as the Ashland Baptist Church is now an arts center at 500 South Center Street.

Ashland's two surviving Second Empire houses are representative of the style only in their roof detailing (see 702 and 706 South Center Street). 702 originally possessed a simple gable roof.

Italianate buildings are also found on Center Street. 600 South Center underwent a major remodeling during the 1870s at which time its Italianate features were added. It was again renovated in the late 1920s. The Italianate structure at 712 South Center Street received a Colonial Revival porch ca. 1900-1920.

Two exceptional Queen Anne houses are located at 904 South Center and 318 North Center. Designed by the same unidentified architect, the houses received similar massing and detailing. The Hugo House at 904 South Center Street features a large bell-cast roof tower, a high-pitched, pressed-tin hipped roof, and two second-story, lattice-work porches. The first story is supported by paired decorative piers. 802 South Center characterizes the transitional Queen Anne/Colonial Revival style with its varied roof lines, simple brackets, classical-style porch, and Palladian window.

Ashland's most handsome representative of the Colonial Revival style is 708 South Center. This 2½-story, three-bay building possesses a gabled roof with a Palladian attic window located on the east end. A second-story gable roof over the north bay dominates the elevation's "L"-shaped porch. Architect's drawings for this house remain with the current owner.

Continuation sheet #2

Item number 7

Page 2

7. Description -- Detailed Analysis (continued)

A Craftsman house with smooth stuccoed elevations, low-hipped roof with exposed rafter ends, and paired windows is located at 718 South Center. Several houses display some East-lake influence in their use of diagonal beaded siding and their attenuated brittle-appearing detailing (see 1014 South Center).

In addition to these areas, Ashland possesses small clusters of historic structures spread randomly across the town. The area located within the L-shaped area formed by Race-course and St. James Street includes a handsome grouping of late 19th-century and early 20th-century houses. Among these are some of the best examples of the Eastlake style found in Virginia. Set on large well-shaded yards, 316 St. James, 402 Duncan, and 207 Howard streets are among the exceptional examples of the Eastlake design. 402 displays decorative shingle siding, match-stick weatherboarding in the gable end, and a single-story porch with decorative brackets and spindle frieze.

The Georgian Revival is best expressed along Caroline and College avenues which developed with the college's resurgence in the 1920s. Notable examples of the Georgian Revival are located at 301, 303, and 305 Caroline Avenue and 204 and 302 College Avenue. The finest example of the style is 305 Caroline which has a hipped roof, stone jack arches with keystones and springers, modillion block cornice, belt course, and swans neck pedimented entrance. Also in the area are representative examples of the Colonial Revival style, specifically, 304 and 305 College Avenue. 304 is dominated by a two-story porch which stretches across the facade and incorporates a two-story pedimented portico. Palladian windows light the first-story front rooms.

Religious and institutional buildings located throughout the district also represent various popular late 19th- and early 20th-century designs. The Ashland Presbyterian Church (southeast corner of Virginia and Myrtle) characterizes the late 19th-century Colonial Revival while the Ashland Christian Church at 301 St. James represents the vernacular Gothic. St. Ann's Church is Ashland's only example of the Tudor style. The stucco-and-exposed-decorative-timber structure is distinguished by a corner tower with steep bell-cast roof, hooded niche with a statue of the Madonna and simple roof brackets. The large brick structures at Randolph-Macon College including Thomas Branch Hall, Mary Branch Dormitory, and Peele Hall (not located in the Randolph-Macon College Complex; National Register of Historic Places) are good examples of the institutional interpretation of the Georgian Revival. In the downtown commercial area, the Beaux Arts is expressed by the Hanover National Bank building built in 1919 at 104 North Center. Its two-story temple front has paired columns, frieze, and pediment, while brick pilasters with cast-concrete capitals define the ends of the structure.

While expressive of its historic origins, Ashland has been affected by the changes of the 20th century. These changes range from minor alterations of buildings such as the addition of false fronts on the commercial structures to the demolition of buildings in the downtown area and the creation of parking lots and apartment complexes on South Center Street between Myrtle Street and Cox Lane. In the commercial area, primarily on England Street between Center and Henry, parking lots, commercial signs, modernized fronts, and a gas station detract from the historic character of the town's core. In spite of these weak areas, the Ashland Historic District displays a sense of historic continuity and evolution. The district is unique in its abundance and quality of late 19th-century frame construction. Virtually every architectural style from the mid-19th century to the mid-20th century is expressed.

8. Statement of Significance -- Historical Background (continued)

could be a successful resort community. First, the tract was a convenient distance from Richmond for a passenger rest stop between that city and Washington, DC. Second, given the popularity of Sunday family picnicking in the countryside, the site was within a day's excursion from Richmond. Aware of these possibilities, Robinson himself bought land in the area.<sup>4</sup>

According to Bishop John C. Granbury writing in 1882, the first attempt to capitalize on the resort potential of the area occurred in the late 1840s and early 1850s with the construction of "a long, low building with a large room suitable for balls, pic-nics, etc... called Slash Cottage." Later, another hotel, Independence Hall, was built and "billiards and a bowling alley were added, a gas house built for lighting the houses and grounds, balls and pic-nics were encouraged, increased communication established with Richmond by a regular accommodation train while special trains were run as occasion required."<sup>5</sup>

The Bishop also reported that by 1858 or 1859 this part of Ashland wore much the same appearance it did twenty years after the War, except for the more extensive buildings erected for the use of the college.<sup>6</sup> Clopman's 1854 map reveals the town was subdivided and lots were offered for sale by that year, although physical growth was slow.<sup>7</sup> Land tax records for 1857 and 1858, for example, indicate less than a dozen buildings worth being taxed in Ashland.<sup>8</sup> An 1864 Civil War map shows about twenty-five buildings, mostly clustered along the railroad tracks several blocks to the north and south of present Route 54, and a few houses on Hanover Avenue.<sup>9</sup>

In 1858 the town was formally incorporated as the town of Ashland, the name of the Kentucky home of native son Henry Clay.<sup>10</sup> That same year the Ashland Hotel and Mineral Well Company was also incorporated. Most members of the corporation were Ashland property owners including Edwin Robinson, George W. Nolley, Charles Stebbins, J.H. Snead, and William Anderson.<sup>11</sup>

Hoping to enhance Ashland's resort image, Robinson built a racecourse at the southwest end of town, complete with a jockey club, a grandstand, and gambling facilities. According to Granbury's eyewitness account, Ashland reached its zenith as a resort town by 1860. Describing a series of races held by the jockey club in 1860, Granbury wrote:

Hundreds of men and women came in special trains from Richmond to witness the races; the grounds about the club-house and the grandstand were crowded, where was a scene of noise and excitement of betting; the intervals between the races saw the gambling saloons below the grandstand filled to overflowing, where a varied array of green tables afforded a ready means of disposing of any surplus winning on the races, or of increasing, possible losses, at faro, monta, spout, thimble-rig, and such other appliances of the Evil One, the fitting and usual accompaniments of the race-course.<sup>12</sup>

Comparing this kaleidoscope of activity with the more settled post-war character of the town, the Bishop concluded: "One can hardly believe such things of quiet Ashland."<sup>13</sup>

Item number 8

Page 2

**8. State of Significance -- Historical Background (continued)**

"Racecourse Street" survives as the only tangible reminder of the antebellum resort, for none of the buildings mentioned by Granbury as part of the racecourse or the Slash Cottage resort remains. Photographs of Independence Hall, a frame Gothic Revival building, and some of the guest cottages are found in Irby's History of Randolph-Macon College.<sup>14</sup> There is also an etching of the college buildings from the late 1870s that may include some of the same buildings then used by the college, which also appear to be in the Gothic Revival style.<sup>15</sup>

Before the Civil War, the center of the town at Railroad Avenue and England Street consisted of a "few small booths...where water was still abundant. Taylor's blacksmith and carriage shop pretty much filled up space."<sup>16</sup> The lack of non-company owned businesses resulted in part from the company's control of liquor sales at the resort. Later when the railroad company had less influence on the town, this intersection developed into a thriving business community.

Apart from the company's development, there were two boarding schools in antebellum Ashland. Located on Virginia Street, the Ashland Female Seminary was empowered to confer degrees in 1858.<sup>17</sup> The following year, St. George Tucker, author and poet, founded the Ashland Academy. Its brief career ended when the war began, Tucker quitting the school to organize a company of soldiers called the Ashland Grays.<sup>18</sup>

Of the houses built before the war, only a few remain, and most were altered greatly in the later building booms of 1880-90 and 1915-25. The Dr. William H. Fox house ( 505 South Center ) was built in the early 1860s; its present appearance results from a later remodeling. 706 South Center Street was probably built about 1858 and given an updated mansard roof after the war. The Greek Revival house at 713 South Center was built in 1858 by John R. MacMurdo, and, except for the asbestos siding and altered window mullions, its basic form remains relatively the same.<sup>19</sup> The Ashland Baptist Church (Greek Revival), built about 1860, now houses the Hanover Arts and Activities Center.

The Civil War brought economic disaster to Ashland. With the Ashland Hotel and Mineral Well Company forced to close its doors, the racecourse was converted to a training field for Confederate troops.<sup>20</sup> Ashland's tourist trade was ruined following the termination of travel to the North.<sup>21</sup> During the Civil War Ashland saw both battles and officers' balls.<sup>22</sup> Independence Hall, the Baptist Church, and the MacMurdo House all served as hospitals.<sup>23</sup> Local legend has it that Stonewall Jackson spent the night at the house of Col. John MacMurdo. The story continues that Jackson's sleep was so disturbed during the night by messengers that he overslept and that his late arrival to the Seven Days Battle thereby resulted in a defeat for the South.<sup>24</sup> Maj. Thomas Rowland, who trained Confederate troops for several months in Ashland, wrote letters home describing wartime Ashland: "Ashland is a very pretty place, a sort of summer retreat from Richmond. The officers all board at the hotel, which is kept in the real old Virginia style, good country fare."<sup>25</sup>

8. Statement of Significance -- Historical Background (continued)

The general depression in the South following the war affected both the tourist trade in Ashland and the R F & P Railroad itself. The railroad company found itself unable to pay dividends in 1865 as a result of large investments in Confederate bonds as well as substantial war damage to both rolling stock and tracks.<sup>26</sup> Between 1866 and 1868, the ownership of the Ashland Hotel and Mineral Well Company lots changed hands twice, finally ending up in the name of Randolph-Macon College of Boydton, Virginia.<sup>27</sup> The Methodist mens' college had also invested in Confederate bonds and found itself in financial difficulty after the war.<sup>28</sup> Rather than close the school, the trustees decided to remove to a more central location and make an attempt to remain solvent.<sup>29</sup> As an inducement to Randolph-Macon, and anticipating a boost to the town's economic future, the railroad company contributed land at the south end of the town to the college. The college decided to use the property of the old resort at the north end of town instead, probably because the use of existing buildings obviated the need to build right away. With the more refined cultural atmosphere provided by the college, the railroad found it now had to share influence with the academic institution.

In the 1870s and 80s, the college began to erect its own buildings. Members of the school's Washington and Franklin Literary Societies longed for a proper hall in which to hold debates and to establish a library. In 1872 they raised more than half the money needed to build a hall with the Randolph-Macon trustees providing the balance.<sup>30</sup> An Alexandria architect, B.F. Price, was engaged to design the new hall.<sup>31</sup> It was an impressive building for Ashland, being the first one of brick construction in the town.<sup>32</sup> Erected in the Italianate style, its imagery was considered suitable for an educational institution of the caliber of Randolph-Macon. It was followed in 1876 by Pace Lecture Hall (Italianate). In 1879 Duncan Memorial Chapel (Ecclesiastical Gothic) was built jointly by the college and the local Methodist congregation.<sup>33</sup> Pettijohn Science Building was also built during this period (demolished in 1976). These four buildings, all facing the railroad tracks, composed a pleasant, sedate, and inviting little campus in view of all who traveled between Richmond and the North. The three extant buildings were placed on the National Register of Historic Places in August 1979.

Ashland experienced a general building boom in the final quarter of the 19th century. The R F & P at this time included specific clauses in their deeds to encourage the settlement of the town by upper-middle-class white families interested in commuting to Richmond. These restrictions prohibited the sale of spiritous liquors without the consent of the railroad and required that dwellings for white families consist of at least four rooms and be erected within 18 months of purchase of the company lot. In return, property owners were entitled to a monthly pass or tickets on the railroad between Ashland and Richmond.<sup>34</sup>

This encouragement by the R F & P, coupled with the new air of respectability given to the town by the college, reestablished Ashland's character as a suburb of Richmond. During the building boom of the 1880s, development spread to St. James and Howard streets on the west side of the tracks and to Virginia Street on the east. Many older houses on Center Street were remodeled with Italianate additions and ornamentation or mansard roofs. The population by 1890 was 948 -- six times the 1860 population of 148.<sup>35</sup>

**8. Statement of Significance -- Background History (continued)**

Ashland continued to function as a rest stop for passengers traveling between Richmond and Washington. About 1906, the Henry Clay Inn, a grand Georgian Revival hotel, was built on the southeast corner of Henry Clay Road and Railroad Avenue (burned, 1946). Mrs. Nancy Shackelford, a resident of Ashland since 1898, recalls the role that the hotel played in the social life of the town:

Everything that wasn't in the Chapel was in the Henry Clay Inn. And it was beautiful inside -- it had hardwood floors inlaid. And the college boys has their parties there. Of course, the girls paraded on the porch, all the way up and down with their dresses.<sup>36</sup>

In 1908 the railroad magnate Jay Gould constructed an electric streetcar line between Ashland and Richmond to compete with the R F & P's accommodation train.<sup>37</sup>

At the same time, a number of vernacular Colonial Revival houses were built along the streets in the Racecourse area, west of the tracks. Modest homes of the type standing on St. James Street continued to be constructed through the mid 1920s. Many of the commercial buildings that face the railroad tracks also date from the years just prior to 1914. A destructive fire in the business area in the 1890s necessitated considerable rebuilding in this vicinity.

Following World War I, Ashland experienced another period of building expansion. A 1922 Herald Progress carried a story entitled "Building Boom in Ashland" which mentioned the improvement of town water facilities, the clearing of the new County Fair grounds near the town, and the Tobacco Growers Cooperative Warehouse to be built near the northwest corner of the intersection of England Street and the tracks. Although the Cooperative ultimately failed, the building today survives as part of the Ashland Shirt Factory. In addition, the article listed eleven new houses under construction, several remodelings, and the opening of the college's new Carnegie Library (now Peele Administration Hall) as well as two new businesses.<sup>38</sup>

By 1919 the downtown business section was dominated by brick buildings symbolizing security and permanence. The Ashland Depot (110 North Center Street), designed by W.P. Lee, was built by Aubrey Hunt of Ashland.<sup>39</sup> The Hanover National Bank (104 North Center Street) replaced its original frame structure with a brick Classical Revival building. One of several Ashland churches remodeled in the 1920s, Ashland Presbyterian on Virginia Street, built in 1874, was remodeled in 1926 by an unidentified architect.<sup>40</sup> Built in 1892, St. Ann's Catholic Church located at England and Henry streets was remodeled in 1925 by L.P. Hartsook and is considered one of Ashland's outstanding buildings.<sup>41</sup>

Ashland is only now awakening to its heritage as a well-preserved late 19th- and early 20th-century railroad suburb. Within the last five years, several old houses along the tracks have been returned to single family residences and renovated (904 South Center, 708 South Center, 310 North Center). With its support for state and federal registration of the 19th-century buildings at Randolph-Macon, the college has demonstrated its commit-

8. Statement of Significance -- Historical Background (continued)

ment to preservation. Appreciation for the past is also exemplified by renovations to several commercial properties along Center Street. Thus, the registration of the Ashland Historic District reflects a growing awareness of the vital role which both the Richmond, Fredericksburg and Potomac and Randolph-Macon have played in the history of the community -- the railroad giving the economic impetus for its growth as a suburb and the college providing the academic and intellectual atmosphere for its growth as a cultural center for its citizens.

10. GEOGRAPHICAL DATA - Boundary Justification

Boundary Justification: The boundaries are justified as follows: the north boundary meets the town's north corporate limit; the south line is drawn to follow Early Street which marks the southern extremity of the turn-of-the-century residential area within the corporate limits; surrounding the district's east boundaries are new housing and commercial development which spreads across Route 1 to Interstate 95; to the west, NW and SW of the district's boundaries is new residential development.

The following structures were determined to be non-contributing elements because they did not conform to the rest of the district in style, scale, or materials:

105 S. Center St.  
220 Henry Clay St.  
201 Henry Clay St.  
Shell Service Station, South Side 200 Block England St.  
Dew Real Estate, South Side 100 Block England St.
